

ABSTRACT OF THE DISCLOSURE

Provided is a communication apparatus including:

an instruction means for instructing a  
5 communication partner to transmit data having a  
designated data length; and

a discrimination means for discriminating a  
status of the communication apparatus,

in which the instruction means instructs the  
10 communication partner to interrupt data transmission  
by setting the designated data length a predetermined  
length in accordance with a result of discrimination  
by the discrimination means.
